

# David Johnson

DevOps / SRE / MLOps · 10.7 years · West Wendyville, USA

david.johnson@yahoo.com · +1-459-231-7461 · <https://github.com/davidjohnson>

## Professional Profile

---

Engineering leader with deep technical background in Go, HCL, and PowerShell. 11 years of experience delivering enterprise-scale solutions.

## Core Competencies

---

Go · HCL · PowerShell · Rust · Bash · Ansible · CloudFormation · Istio · K3s · Linkerd · Kubernetes · GitHub Actions · Argo Workflows · Opsgenie · Grafana · ELK Stack · Prometheus · Hetzner · Alibaba Cloud · TorchServe · Kale · MLOps · GitOps · Incident Management

## Professional Experience

---

### Release Engineer at HashiCorp (2024-01 – Present)

- Built CI/CD pipelines using Argo Workflows, reducing deployment time from 22s to 280ms
- Implemented log aggregation using Argo Workflows, processing 500+ logs/day
- Built disaster recovery solution using Argo Workflows, achieving RTO of 221ms

### Cloud Engineer at Notion (2019-12 – 2023-10)

- Designed and implemented infrastructure as code using Triton Inference Server, managing 5000+ servers
- Optimized cloud infrastructure using Triton Inference Server, reducing costs by 22%
- Established GitOps workflows using Triton Inference Server, improving deployment frequency by 34%
- Implemented security scanning using PowerShell, identifying 500+ vulnerabilities

### SRE at Spotify (2016-08 – 2019-11)

- Built disaster recovery solution using Grafana, achieving RTO of 97ms
- Implemented log aggregation using TensorFlow Serving, processing 50000+ logs/day
- Established chaos engineering practices using CloudFormation, improving system resilience
- Built CI/CD pipelines using TensorFlow Serving, reducing deployment time from 27s to 61ms

### Cloud Engineer at CodeCraft Studios (2014-10 – 2016-03)

- Designed and implemented infrastructure as code using Chaos Engineering, managing 5000+ servers
- Created self-service provisioning portal using DigitalOcean, serving 100000+ engineers
- Created monitoring and alerting system using Chaos Engineering, reducing MTTR by 60%
- Built CI/CD pipelines using DigitalOcean, reducing deployment time from 30s to 278ms

## Education

---

**B.Eng.** in Cybersecurity — EPFL (2015)
