About Me

Technical leader in devops / sre / mlops with extensive experience designing microservices, optimizing performance, and building high-performing teams. Proficiency in Bash, PowerShell, Rust.

Education

M.Sc. in Data Science

2018

University of Michigan — GPA: 3.99

SRE Team

Projects

Graph Query Builder (2020)

Designed and implemented Observability Dashboard with Rust, integrating with Bash for seamless data flow

Tech: PowerShell, Rust, Bash

Token Bucket Limiter (2021)

Designed Container Registry leveraging Rust microservices architecture with Bash for caching

Tech: PowerShell, Rust, Bash

PDF Parser Toolkit (2025)

Implemented Monitoring System using PowerShell, achieving 99.9% uptime and handling 50k+ requests daily

Tech: Rust, PowerShell, Bash

Skills

Bash PowerShell Rust Crossplane Helm Docker Kubernetes Skopeo Azure DevOps Jenkins
Datadog ELK Stack DigitalOcean GCP Linode AWS Kubeflow TorchServe
Triton Inference Server Incident Management GitOps Chaos Engineering Infrastructure as Code

Internships / Experience

Release Engineer at Stripe (2024-03 – Present)

Established chaos engineering practices using Zero Trust, improving system resilience

Built disaster recovery solution using Bash, achieving RTO of 192ms

Implemented log aggregation using Crossplane, processing 50000+ logs/day

MLOps Engineer at Microsoft (2022-02 – 2024-01)

Built CI/CD pipelines using Bash, reducing deployment time from 6s to 494ms

Created monitoring and alerting system using Bash, reducing MTTR by 39%

Established chaos engineering practices using Bash, improving system resilience

Release Engineer at DeployFast (2020-01 – 2022-01)

Created monitoring and alerting system using Pulumi, reducing MTTR by 34%

Implemented log aggregation using PagerDuty, processing 100+ logs/day

Built automated backup solution using Incident Management, ensuring 100000% data protection

Created self-service provisioning portal using Incident Management, serving 50000+ engineers

Infrastructure Engineer at Cloudflare (2019-03 – 2019-09)

Built disaster recovery solution using Rust, achieving RTO of 282ms

Implemented log aggregation using Rust, processing 100000+ logs/day

Created monitoring and alerting system using PagerDuty, reducing MTTR by 47%

Implemented container orchestration using PagerDuty, managing 5000+ containers
