About Me

Senior technical leader specializing in backend engineering with expertise in C#, Rust, Kotlin. Proven success in technical vision, team development, and stakeholder management.

Education

M.Tech. in Mathematics

University of Waterloo — GPA: 3.92

Teaching Assistant

2017

Projects

PDF Parser Toolkit (2024)

Designed Message Queue System leveraging Spring Boot microservices architecture with LlamaIndex for caching

Tech: Spring Boot, Flask, LlamaIndex

Skills

C# Rust Kotlin Spring Boot Flask LlamaIndex Elasticsearch Supabase PlanetScale

MongoDB RabbitMQ Terraform Ansible GitHub Actions Helm Azure GCP Anthropic

OpenAI API Hugging Face Replicate GraphQL Agile TDD REST API Design

Internships / Experience

API Developer at DataPulse (2024-11 – Present)

Designed and implemented message queue system using Flask, processing 10000+ messages/hour

Reduced infrastructure costs by 39% through optimization using Cloudflare

Created authentication and authorization system using Flask, securing 5000+ user accounts

Architected and built RESTful APIs serving 10000+ requests/day using PlanetScale, reducing response time by 47%

Platform Engineer at PipelineIO (2024-03 – 2024-10)

Developed real-time data processing pipeline using Supabase, handling 100000+ queries/second

Reduced infrastructure costs by 17% through optimization using Microservices

Platform Engineer at Figma (2021-10 – 2024-03)

Designed and implemented message queue system using GitHub Actions, processing 5000+ messages/hour

Reduced infrastructure costs by 55% through optimization using Vercel

Designed and implemented microservices architecture using LlamaIndex, handling 10000+ concurrent users

Backend Developer at Palantir (2017-07 – 2021-04)

Built event-driven architecture using PostgreSQL, processing 100000+ events daily

Designed and implemented microservices architecture using Elasticsearch, handling 100+ concurrent users
